## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-46 and 55-58, drawn to multiplex communications routing using a particular switching network arrangement, classified in class 370, subclass 386.
  - II. Claims 47-54, drawn to multiplex communications data flow control based on data flow rate measurement, classified in class 370, subclass 232.

Inventions claims set 1 of FICON fibre channel switch and claims set 2 of a buffer management system are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the FICON fibre channel switch does not require the use of a buffer management system for providing a connection between endpoints. The subcombination has separate utility such as flow control to prevent overruns or underruns.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
